AB We have identified a gene that has a high level of mRNA expression in  
undifferentiated, multipotential hematopoietic cells (FDCP-Mix) and that  
downregulates both transcript and protein, as these cells are induced to  
differentiate into mature myeloid cells. Sequence anal. of this gene has  
identified it as a serine protease inhibitor EB22/3 (serpin 2A).

Constitutive expression of serpin 2A in FDCP-Mix cells was associated with an increase in the clonogenic potential of the cells and with a delay in the appearance of fully mature cells in cultures undergoing granulocyte macrophage differentiation when compared with control cells. Serpin 2A was also found to be expressed in bone marrow-derived bipotent granulocyte macrophage progenitor cells (GM-colony forming cell [CFC]), but not in erythrocyte progenitor cells from day 15 fetal liver. Expression of serpin 2A also showed a marked up regulation during the activation of cytotoxic suppressor CD8+ T cells, with a clear lag between the appearance of transcript and detection of protein.

'SE' IS NOT A VALID FORMAT FOR FILE 'REGISTRY'

The following are valid formats:

Substance information can be displayed by requesting individual fields or predefined formats. The predefined substance formats are: (RN = CAS Registry Number)

```

REG      - RN
SAM      - Index Name, MF, and structure - no RN
FIDE     - All substance data, except sequence data
IDE      - FIDE, but only 50 names
SQIDE    - IDE, plus sequence data
SQIDE3   - Same as SQIDE, but 3-letter amino acid codes are used
SQD      - Protein sequence data, includes RN
SQD3     - Same as SQD, but 3-letter amino acid codes are used
SQN      - Protein sequence name information, includes RN

CALC     - Table of calculated properties
EPROP    - Table of experimental properties
PROP     - EPROP and CALC

```

Any CA File format may be combined with any substance format to

obtain CA references citing the substance. The substance formats must be cited first. The CA File predefined formats are:

ABS -- Abstract  
APPS -- Application and Priority Information  
BIB -- CA Accession Number, plus Bibliographic Data  
CAN -- CA Accession Number  
CBIB -- CA Accession Number, plus Bibliographic Data (compressed)  
IND -- Index Data  
IPC -- International Patent Classification  
PATs -- PI, SO  
STD -- BIB, IPC, and NCL

IABS -- ABS, indented, with text labels  
IBIB -- BIB, indented, with text labels  
ISTD -- STD format, indented

OBIB ----- AN, plus Bibliographic Data (original)  
OIBIB ----- OBIB, indented with text labels

SBIB ----- BIB, no citations  
SIBIB ----- IBIB, no citations

The ALL format gives FIDE BIB ABS IND RE, plus sequence data when it is available.

The MAX format is the same as ALL.

The IALL format is the same as ALL with BIB ABS and IND indented, with text labels.

For additional information, please consult the following help messages:

HELP DFIELDS -- To see a complete list of individual display fields.  
HELP FORMATS -- To see detailed descriptions of the predefined formats.  
ENTER DISPLAY FORMAT (IDE):end

REFERENCE COUNT: 7 THERE ARE 7 CITED REFERENCES AVAILABLE FOR THIS  
RECORD. ALL CITATIONS AVAILABLE IN THE RE FORMAT

AB Disclosed is a human is a DNA topoisomerase I  $\alpha$  (hTopI- $\alpha$ )  
polypeptide and DNA (RNA) encoding such hTopI- $\alpha$  polypeptide. Also  
provided is a procedure for producing such polypeptide by recombinant  
techniques and antibodies and antagonists against such polypeptide. Also  
provided are methods of using the antibodies and antagonist inhibitors to  
inhibit the action of hTopI- $\alpha$  for therapeutic purposes such as an  
antitumor agent, to detect an autoimmune disease, or retroviral  
infections and to treat adenocarcinoma of the colon. Diagnostic  
methods for detecting mutations in the coding sequence and alterations in  
the concentration of the polypeptides in a sample derived from a host are also  
disclosed.

ST DNA topoisomerase I cDNA sequence; antitumor DNA topoisomerase I;  
autoimmune disease DNA topoisomerase I; retroviral infection DNA  
topoisomerase I

IT Retroviridae

AB The invention provides a human S-adenosyl-5-homocysteine hydrolase (SAHH) and polynucleotides which identify and encode SAHH. The invention also provides expression vectors, host cells, agonists, antibodies and antagonists. The invention also provides methods for treating disorders associated with expression of SAHH including infection, neoplastic disorders and disorders of the immune system.

AB Recombinant or substantially pure preps. of polypeptides and their encoding nucleic acids are described which may be useful for diagnostic and vaccine compns. for *Helicobacter pylori* infection. Thus, *H. pylori* chromosomal DNA was isolated by a standard DNA protocol, nebulized, purified, and sequenced using the multiplex DNA sequencing based on chemical degradation methods. A gene expression system, such as the pET-28b vector system, was selected for cloning and expression of recombinant protein in *Escherichia coli*. Selection of candidate protein antigens for vaccine development are derived from the nucleic acid sequences by analyzing the open reading frames (ORFs) for homol. to other known exported or membrane proteins and using discriminant anal. for predicting exported and membrane proteins. ORF amino acid sequences identified as exported or membrane-associated by the discriminant anal. algorithm are likely protein antigens for vaccine development. Thus, 546 nucleic acid sequences and their derived ORF amino acid sequences are provided. Gene knockout techniques using oligonucleotide primers for cloning, deletion, and targeting are also provided to identify nucleic acids that encode proteins essential for growth or viability, and thereby are preferred drug targets. Strain variation anal. provides nucleic acids, including probes, and peptide and polypeptide sequences that are common to all *H. pylori* strains but are not found in other bacterial species. Cloning, purifn, and characterization of the genes encoding peptidyl-prolyl cis-trans isomerase (ppi) and glutamate racemase (mirI) are described in detail as specific examples, and glutamate racemase activity can be applied in high throughput drug screening assays.
